

BESPOKE SERVICES TO PROTECT PEOPLE AND ASSETS

When it comes to protecting high net worth individuals (HNWIs), corporate executives, celebrities, and other high-profile targets from physical and digital threats, tailored and responsive service is paramount. Our team of former law enforcement, intelligence, and cyber professionals work with a variety of private clients to cater cybersecurity, physical security, and compliance programs to their needs.

Combined with industry-leading capabilities and proprietary collection tools, our team boasts a global network of investigators and protection assets, as well as experience conducting operations in over 110 countries, including major emerging markets. We pride ourselves on a tailored discreet approach to risk management for private clients, their families, and their businesses.

HIGHLIGHTS

Executive Digital Protection (EDP)

Our EDP program consists of an in-depth assessment of a client's online presence to identify vulnerabilities, leaked PII, and threats. We then work with the client and their team to mitigate risks by removing PII and monitoring for leaks and threats on an ongoing basis.

Travel Intelligence & Security

We leverage a global network of security assets, in-house intelligence tools, and decades of experience to protect clients traveling at home or abroad. In addition to guards and security drivers, our team provides pre-travel itinerary risk and local security reports to inform strategic planning.

Threat Response & Monitoring

Prescient's Threat Response program consists of **attribution**, **investigation**, and **monitoring** capabilities. Once a threat actor has been identified, we work with stakeholders to provide constant, concise updates while we investigate and monitor the situation.

Reputational Due Diligence

When clients are considering investments, hires, or business partners, Prescient helps vet subjects to identify reputational and compliance risks, including criminal activity, litigation proceedings, negative news, and adverse social media activity, among others.

vCISO Advisory & Cyber Consulting

Prescient's Virtual Chief Information Security Officer (vCISO) program is available to private clients who require on-demand support, from in-home network security and ongoing cyber awareness training to global privacy risk assessments.
